Powder Technology 85 (1995) 289–292

POWDER TECHNOLOGY

Subject Index of Volume 85

Adhesion
rupture of dry agglomerates, 37
Adsorption
characterization of the decomposition products of zirconium acetylacetonate: nitrogen adsorption and spectrothermal investigation, 253
Agglomeration
chemical reaction induced agglomeration and defluidization of fluidized beds, 29
kinetics of agglomerate growth in a continuous coal–oil purification process, 135
Anisotropy
anisotropy in pore structure of porous media, 143
Ash
kinetics of agglomerate growth in a continuous coal–oil purification process, 135
Attrition
the brittleness of substances crystallized in industrial processes, 71
Axial-symmetry
discrete element simulation of internal stress and flow fields in funnel flow hoppers, 153

Breakage
rupture of dry agglomerates, 37
solution of the batch grinding equation, 189
Brittleness
the brittleness of substances crystallized in industrial processes, 71

Calcium
the use of a circulating fluidized bed absorber for the control of sulfur dioxide emissions by calcium oxide sorbent via in situ hydration, 115
Characterization
characterization of the decomposition products of zirconium acetylacetonate: nitrogen adsorption and spectrothermal investigation, 253
Circulating
the use of a circulating fluidized bed absorber for the control of sulfur dioxide emissions by calcium oxide sorbent via in situ hydration, 115
Circulating fluidized beds
experimental characterization of a short retention time gas–solid separator, 11
modelling of the flow structure in circulating fluidized beds, 19
internal recirculation flow structure in vertical upflow gas–solids suspensions. Part I. A core–annulus model, 171
internal recirculation flow structure in vertical upflow gas–solid suspensions. Part II. Flow structure predictions, 179
a novel fluidized-bed coating of fine particles by rapid expansion of supercritical fluid solutions, 275
Coal
kinetics of agglomerate growth in a continuous coal–oil purification process, 135
Coating
a novel fluidized-bed coating of fine particles by rapid expansion of supercritical fluid solutions, 275
Cohesive powders
a hypoplastic constitutive model for cohesive powders, 1
elastoplastic finite element model development and validation for low pressure uniaxial compaction of dry cohesive powders, 241
Compaction
elastoplastic finite element model development and validation for low pressure uniaxial compaction of dry cohesive powders, 241
Constitutive equation
elastoplastic finite element model development and validation for low pressure uniaxial compaction of dry cohesive powders, 241
Core–annulus flow
experimental study on the interface of core–annulus flow in the riser of a circulating fluidized bed, 57
Core–annulus internal recirculation
internal recirculation flow structure in vertical upflow gas–solid suspensions. Part II. Flow structure predictions, 179
Core–annulus model
internal recirculation flow structure in vertical upflow gas–solids suspensions. Part I. A core–annulus model, 171
Cracks
the brittleness of substances crystallized in industrial processes, 71
Crystallization
the brittleness of substances crystallized in industrial processes, 71
Cyclic compaction
cyclic compaction of soils, grains and powders, 97
Cyclones
experimental characterization of a short retention time gas–solid separator, 11
Cylindrical tubes
wall effects on free-settling velocity of non-spherical particles in viscous media in cylindrical tubes, 83

Defluidization
chemical reaction induced agglomeration and defluidization of fluidized beds, 29

Elastoplastic
elastoplastic finite element model development and validation for low pressure uniaxial compaction of dry cohesive powders, 241

Elsevier Science S.A.

Electron spin resonance
mechano-radicals produced from ground quartz and quartz glass, 269
Encapsulation
processing of porcelain enamel glass powders for electrostatic spraying, 65
Extrusion process
development of numerical simulation methods and analysis of extrusion processes of particle-filled plastic materials subject to slip at the wall, 227

Fibrous particles
development of a mobilization technique for fibrous materials, 105
Filling process analysis
slip characterization of powder/binder mixtures and its significance in the filling process analysis of powder injection molding, 45
Fine particles
a novel fluidized-bed coating of fine particles by rapid expansion of supercritical fluid solutions, 275
Finite difference analysis
development of numerical simulation methods and analysis of extrusion processes of particle-filled plastic materials subject to slip at the wall, 227
Finite element
elastoplastic finite element model development and validation for low pressure uniaxial compaction of dry cohesive powders, 241
Finite element analysis
development of numerical simulation methods and analysis of extrusion processes of particle-filled plastic materials subject to slip at the wall, 227
Flow
modelling of the flow structure in circulating fluidized beds, 19
Flow structure
internal recirculation flow structure in vertical upflow gas–solid suspensions. Part II. Flow structure predictions, 179
Fluidized beds
chemical reaction induced agglomeration and defluidization of fluidized beds, 29
the use of a circulating fluidized bed absorber for the control of sulfur dioxide emissions by calcium oxide sorbent via in situ hydration, 115
stable operating velocity range for multistage fluidized bed reactors with downcomers, 193
measurement of jet angles in fluidized beds, 221
Free-settling velocity
wall effects on free-settling velocity of non-spherical particles in viscous media in cylindrical tubes, 83
Funnel flow hoppers
discrete element simulation of internal stress and flow fields in funnel flow hoppers, 153

Gaseous suspension
measurement of particle flow properties in a suspension by a laser system, 261
Gas jets
development of a mobilization technique for fibrous materials, 105
Gas–solids flow
experimental study on the interface of core–annulus flow in the riser of a circulating fluidized bed, 57
internal recirculation flow structure in vertical upflow gas–solids suspensions. Part I. A core–annulus model, 171
Gas–solid suspensions
internal recirculation flow structure in vertical upflow gas–solid suspensions. Part II. Flow structure predictions, 179
Granular materials
effect of gravity on mass flow rate in an hour glass, 279
Gravity
effect of gravity on mass flow rate in an hour glass, 279
Grinding
solution of the batch grinding equation 189
mechano-radicals produced from ground quartz and quartz glass, 269

Hopper stress effects
discrete element simulation of internal stress and flow fields in funnel flow hoppers, 153
Hydrodynamics
modelling of the flow structure in circulating fluidized beds, 19
measurement of jet angles in fluidized beds, 221
Hydrogen absorption–desorption
a detailed morphological study on the magnetic fine particles produced by hydrogen absorption–desorption process, 91

Ice particles
pneumatic conveying of ice particles through mine-shaft pipelines, 203
Interface
experimental study on the interface of core–annulus flow in the riser of a circulating fluidized bed, 57
Internal recirculation
internal recirculation flow structure in vertical upflow gas–solids suspensions. Part I. A core–annulus model, 171
Interparticle forces
rupture of dry agglomerates, 37
Intrinsic pressure
a hypoplastic constitutive model for cohesive powders, 1

Jets
measurement of jet angles in fluidized beds, 221

Laser Doppler velocimeter
discrimination between solid and liquid velocities in slurry flow using laser Doppler velocimeter, 127
measurement of particle flow properties in a suspension by a laser system, 261
Lateral stress
cyclic compaction of soils, grains and powders, 97

Mass flow rate
effect of gravity on mass flow rate in an hour glass, 279
Mechano-radical
mechano-radicals produced from ground quartz and quartz glass, 269
Mine shafts
pneumatic conveying of ice particles through mine-shaft pipelines, 203
Mobilization
development of a mobilization technique for fibrous materials, 105
Model
kinetics of agglomerate growth in a continuous coal–oil purification process, 135
Modelling
modelling of the flow structure in circulating fluidized beds, 19
solution of the batch grinding equation 189

stable operating velocity range for multistage fluidized bed reactors with downcomers, 193
Momentum transfer
development of a mobilization technique for fibrous materials, 105
Morphology
a detailed morphological study on the magnetic fine particles produced by hydrogen absorption–desorption process, 91
Multistage
stable operating velocity range for multistage fluidized bed reactors with downcomers, 193

Newtonian liquids
wall effects on free-settling velocity of non-spherical particles in viscous media in cylindrical tubes, 83
Non-spherical particles
wall effects on free-settling velocity of non-spherical particles in viscous media in cylindrical tubes, 83

Oedometry
cyclic compaction of soils, grains and powders, 97

Particle cloud density
measurement of particle flow properties in a suspension by a laser system, 261
Particle cluster formation
experimental study on the interface of core–annulus flow in the riser of a circulating fluidized bed, 57
Particle-filled plastic materials
development of numerical simulation methods and analysis of extrusion processes of particle-filled plastic materials subject to slip at the wall, 227
Particle velocity
measurement of particle flow properties in a suspension by a laser system, 261
Particulate materials
cyclic compaction of soils, grains and powders, 97
Phase Doppler particle analysis
measurement of particle flow properties in a suspension by a laser system, 261
Pipelines
pneumatic conveying of ice particles through mine-shaft pipelines, 203
Plane strain
discrete element simulation of internal stress and flow fields in funnel flow hoppers, 153
Pneumatic conveying
pneumatic conveying of ice particles through mine-shaft pipelines, 203
Poly(silane)
processing of porcelain enamel glass powders for electrostatic spraying, 65
Poly(siloxane)
processing of porcelain enamel glass powders for electrostatic spraying, 65
Porcelain enamel powders
processing of porcelain enamel glass powders for electrostatic spraying, 65
Pore structure
anisotropy in pore structure of porous media, 143
Porous media
anisotropy in pore structure of porous media, 143
Powder/binder mixtures
slip characterization of powder/binder mixtures and its significance in the filling process analysis of powder injection molding, 45
Powder injection molding
slip characterization of powder/binder mixtures and its significance in the filling process analysis of powder injection molding, 45

Quartz
mechano-radicals produced from ground quartz and quartz glass, 269

Rare earth–transition metals
a detailed morphological study on the magnetic fine particles produced by hydrogen absorption–desorption process, 91
Refractive index
discrimination between solid and liquid velocities in slurry flow using laser Doppler velocimeter, 127
Regular packs
anisotropy in pore structure of porous media, 143
RESS process
a novel fluidized-bed coating of fine particles by rapid expansion of supercritical fluid solutions, 275
Reynolds stress
measurement of particle flow properties in a suspension by a laser system, 261

Screw characteristics
development of numerical simulation methods and analysis of extrusion processes of particle-filled plastic materials subject to slip at the wall, 227
Separation
experimental characterization of a short retention time gas–solid separator, 11
kinetics of agglomerate growth in a continuous coal–oil purification process, 135
Shearing
a hypoplastic constitutive model for cohesive powders, 1
Signal amplitude discrimination
discrimination between solid and liquid velocities in slurry flow using laser Doppler velocimeter, 127
Size distribution
solution of the batch grinding equation 189
Slip characterization
slip characterization of powder/binder mixtures and its significance in the filling process analysis of powder injection molding, 45
Slip effects
slip characterization of powder/binder mixtures and its significance in the filling process analysis of powder injection molding, 45
Slip phenomena
development of numerical simulation methods and analysis of extrusion processes of particle-filled plastic materials subject to slip at the wall, 227
Slugs
stable operating velocity range for multistage fluidized bed reactors with downcomers, 193
Slurry flow
discrimination between solid and liquid velocities in slurry flow using laser Doppler velocimeter, 127
Solid–liquid velocities
discrimination between solid and liquid velocities in slurry flow using laser Doppler velocimeter, 127
Solids suspension flow
internal recirculation flow structure in vertical upflow gas–solids suspensions. Part I. A core–annulus model, 171

Specific surface area
mechano-radicals produced from ground quartz and quartz glass, 269
Spectrothermal investigation
characterization of the decomposition products of zirconium acetylacetonate: nitrogen adsorption and spectrothermal investigation, 253
Strength
rupture of dry agglomerates, 37
Stress
a hypoplastic constitutive model for cohesive powders, 1
Sulfur dioxide
the use of a circulating fluidized bed absorber for the control of sulfur dioxide emissions by calcium oxide sorbent via in situ hydration, 115
Superficial fluid
a novel fluidized-bed coating of fine particles by rapid expansion of supercritical fluid solutions, 275

Tensile strength
a hypoplastic constitutive model for cohesive powders, 1
Tomography
measurement of jet angles in fluidized beds, 221

Vertical deformation
cyclic compaction of soils, grains and powders, 97

Wall effects
wall effects on free-settling velocity of non-spherical particles in viscous media in cylindrical tubes, 83
discrete element simulation of internal stress and flow fields in funnel flow hoppers, 153

Zirconium acetylacetonate
characterization of the decomposition products of zirconium acetylacetonate: nitrogen adsorption and spectrothermal investigation, 253
